

Case Study

Mighty Blue Cloud

Company Overview

Mighty Blue Cloud Is A Managed IT Services Provider (MSP) That Offers Secured Cloud Hosting Solutions For Businesses.

Based in Vancouver, BC, Mighty Blue Cloud is a provider of Managed IT Services that provides businesses with useful IT strategies and the highest quality data security and backup. The company provides both large enterprises and SMEs with Oversight Cloud Computing Solutions. Additionally, Mighty Blue Cloud uses cutting-edge technology to secure and host their data on its private servers.

The company utilizes top-notch expertise IT expertise to provide IT management to businesses that improve the performance of their websites, provides them with back-ups, make storage or database migration easier, and safeguards their private server with the “best-in-class” firewall.

“We are Canada’s foremost cloud hosting company that helps relieve enterprises from the terrors of losing data. We act as a driving force in helping customers make their data secure and available at all times,” says Jainesh Nand, President of Mighty Blue Cloud.

Their Challenge

As an MSP, Mighty Blue Cloud is constantly looking to shore up its firewall protection with top-notch cyber-security solutions. The company is Canada’s foremost cloud computing company and thus feels a real responsibility to safeguard its clients from cyber-threats and the loss of data.

Since its inception, Mighty Blue Cloud has been widely recognized as the driving force behind many Canadian businesses that have their data secure and available at all times; the company is adamant to maintain its reputation and therefore has been searching for cyber-security products that successfully thwart today’s increasingly sophisticated malware and viruses.

The cyber-security solutions that were previously used by Mighty Blue Cloud—Sophos and Cylance—were based on two entirely different approaches to protection, which create some confusion. More than that, both these IT security solutions allowed viruses and malware to penetrate through their protection.

The company quickly realized that it needed a better and more innovative approach to protection against cyber-threats. Soon after, it began its search for a powerful cyber-security solution. The company was ultimately led to Comodo and its range of cyber-security solutions.

“We previously used Sophos and Cylance. Both are based on completely different approaches to protection; however, they both allowed viruses and malware to pass through their protection. After switching to Comodo, we no longer have issues with ransomware and no longer have issues with performance on the system. Comodo provides the best level of security with a performance that others can’t beat,” says Nand.

The Solution

Mighty Blue Cloud Partnered With Comodo To Take Its IT Security To The Next Level. Comodo Displaced Two Competitive Incumbents—Sophos and Cylance.

A major reason Mighty Blue Cloud chose Comodo was because of its auto containment and threat detection feature. The auto containment runs an unknown executable in a kernel API virtualized mode, thereby offering attack surface reduction (ASR), which neutralizes ransomware attacks. Additionally, Comodo’s AEP utilizes a Default Deny Platform to provide complete protection against zero-day threats while having no impact on end-user experience or workflows.

“We chose Comodo because of its innovation. The auto containment technology takes security to the next level,” revealed Nand.

Comodo’s Valkyrie analyzes and gives a trusted verdict for 100% of files on a network. Additionally, Comodo’s platform shares intelligence and is, therefore, more secure than disparate products that claim the best of the breed but don’t share information. Comodo has architected its cyber-security product to maximize intelligent sharing between every component of the platform, therefore providing superior security.

“Unlike other antivirus offerings, which have false positives, Comodo provides that extra level of protection and prevents an unknown file from damaging anything on the system. Comodo is always there for my business, and their team is always available when we have questions or require technical assistance. They truly care about their partners,” says Nand.

Alan Knepper, President and Chief Revenue Office at Comodo, says, "Our partnership and next-generation Cybersecurity helps Mighty Blue Cloud with the critical task of ensuring that their customer's data is secure at all times."
